

## Racer's Track Tool for Less than 20 Bucks

*Transform your iPhone into a professional data and video recording tool!*

**Cologne, Germany** - *Harry's LapTimer* is track enthusiast's killer app: utilizing GPS and the inbuilt accelerometers, it will start and stop your laps and sector times, offer detailed data analysis to improve your lap times, record amazing videos to share with your friends and build your personal lap history database.

The app *Harry's LapTimer* changes your iPhone into a professional GPS data recording tool and works fully automated with start and stop triggers for any race circuit worldwide.

While on track, you get on screen track and position overview, real time speed and g-force information in amazing precise quality. In parallel a fully automated video of your lap can be recorded – no need to push any button while on the circuit!

The app builds up your personal track history including all lap data you can think of – and you can even extend the data recording through OBD II to add e.g. gear, shift light, coolant temperature, revs.

Analytic tools measure your driving habits in full detail for each sector and offer impressive graphical presentations to learn from. By comparing your track history, you get indication of your currently best-combined lap, which can even be used as on screen challenge for your next lap.

Recorded videos are overlaid with track overview, position indication as well as speed, and g-force information. The produced video is real joy to share with your friends.

The 2012 Spring release (v15) will be available soon, enriched with lots of new features including localizations in Spanish, French, and German.
